WHAT IS THE TEL VIEW/PREVIEW CONCEPT?

The complete solution to your Telemetry and SCADA needs. Dynamic Logic can provide you with your pre-configured ready-to-use Masterstation.

Based on standard core software, there are two base configurations.

PreView

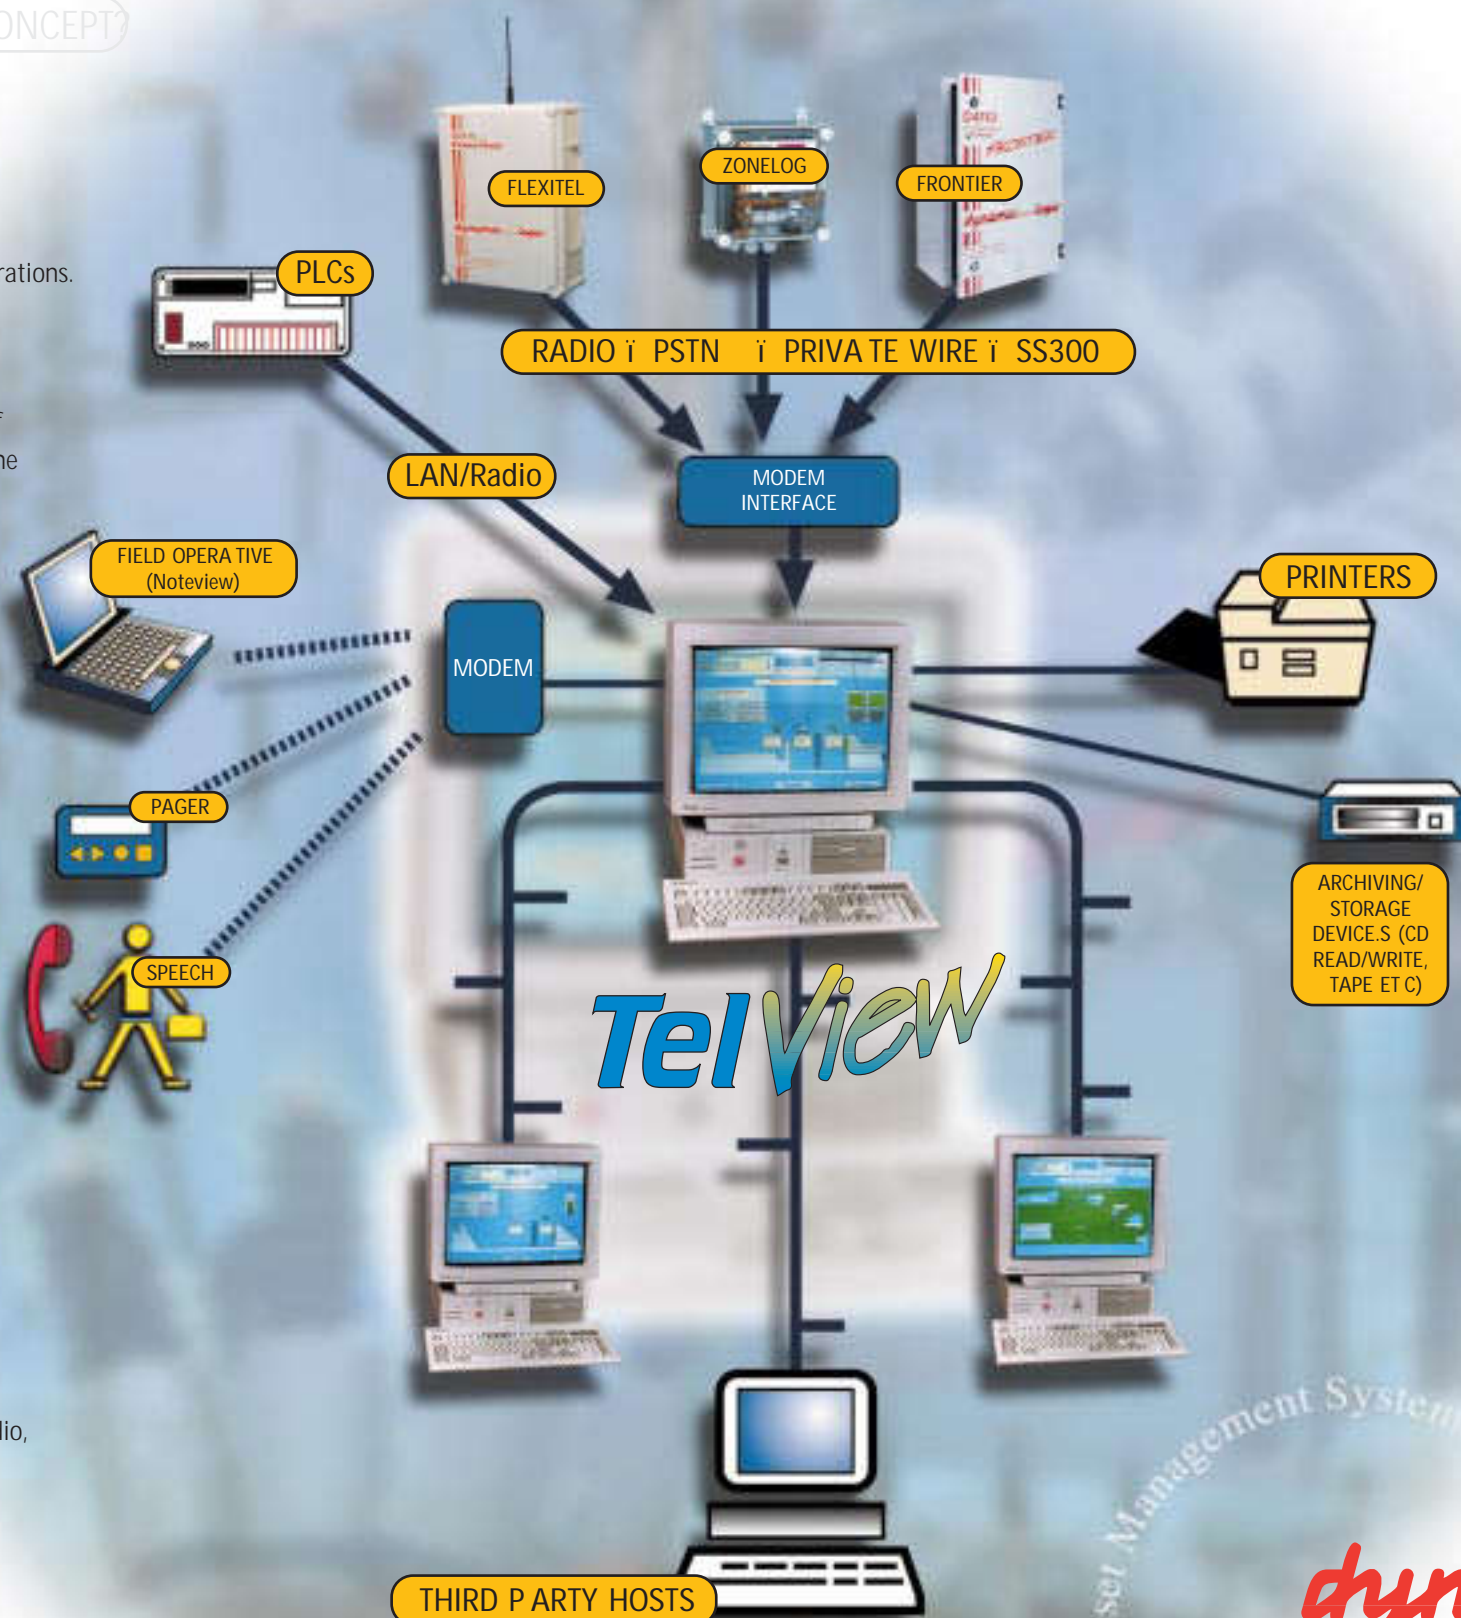

An entry level, stand alone Masterstation offering a choice of operating systems, selection of communications media and the basis for expansion to:

TelView

An advanced level Masterstation offering mimic based presentation, extended features, multiple communications options and networking facilities.

BENEFITS

- Flexible
- User friendly
- Logical presentation and easy navigation
- Easy configuration by customer
- Minimum effort needed to learn to operate
- Application software transportable between standard operating systems: Windows NT and Windows 95
- Multiple media communications, PSTN, Private Wire, Radio, Securestream 300 (SS 300)
- Out of Hours operation
- Field staff connectivity
- Clear display of alarm condition
- Sophisticated Supervisory Control
- Management Reports
- Historical Trending and Archiving
- Standard export to third party analysis and Management Information Systems

FEATURES

- Open system connectivity
- Native 32 bit code
- Client Server expandable system
- DDE/SQL support
- Alarm forwarding
- Report generation
- Multi user LAN
- Trend reports

PRODUCT OVERVIEW

The Telview/Preview concept has been developed on the back of over 25 years experience by Dynamic Logic in providing industry proven Wide Area Telemetry solutions to a broad range of applications.

The key to the product's success is the communications management interface of the Masterstation in that it can handle many modem inputs, both Private Wire and discontinuous, and does not need to physically allocate RTU's to specific communications ports. This allows for flexible design of Wide Area Asset Management Systems. Coupled with this is a powerful Man-Machine Interface (MMI), comprehensive alarm handling, report generation, trending and archiving.

The whole package has been designed with Open connectivity to other information systems, third party hardware, and software. Used in conjunction with Dynamic Logic RTUs the maximum benefits from the telview package and it's built in power can be realised.
